

H BEAMS

About Us

Paam Group is a leading contract manufacturer, supplier and exporter of building materials. With more than three decades of experience we provide a one stop solution for all types of scaffolding and shuttering products.

It has traditionally been our endeavor to provide quality materials coupled with committed services. As we all know that construction of any kind is a complex process involving varied materials along with customization; we do not limit ourselves to our standard range of products. We often customize the products as per our customers' specific requirements. The experience gathered by us helps us to provide our clients with the most optimum products at the right prices.

Though we have our base office at Hyderabad, we have spread our wings to other geographical locations. Our branches are strategically located in Andhra Pradesh, Karnataka, Orissa, Bihar and West Bengal so as to enable us cater to customers across India with right material at the right place. More branches are in the offing, to help us serve you better.

We have a large clientele which includes some of the most prestigious and world-renowned names in the industry.

What is H- Beam ?

H- beam, is an engineered product comprising of solid-webbed beams made of wood-based materials. H- Beam consists of a web and flange section which makes it stronger and denser. The wooden flange are made of pinewood which is chemically treated, seasoned and planed maintaining complete accuracy in order to render uniformity to the flanges. The web consists of Boiling Water proof Plywood. The flanges and web are then finger jointed and hot processed resulting in a solid composite structure which is symmetrical and dimensionally stable. The section of the H-Beam is "I" shaped which makes it structurally strong and economical in the long run due to high number of repetitions.

Advantages of using H-Beam

- Gives a Clean, accurate and uniform concrete finish; free from any bulging and distortion.
- More predictable, hence easy to design and use.
- Minimizes work at site resulting in increased labour productivity.
- Lesser support is required when used for form work making.
- Ensures safety and speedy construction
- Long-lasting, resulting in reduction in timber consumption.
- Economical thus boosting savings within a short period of usage.
- Environment friendly (the best reason why it should be opted for).

Featurers

- High dimensional stability
- Consistent Strength
- Uniform size
- Low shrinkage
- Compact, lightweight and shock proof
- High load-bearing capacity
- Easy to transport, handle and stock
- Easy to understand by traditional workmen
- Retains structural properties over a period of time, even after continual usage.

Cost Advantage

	Traditional Wood	H Beam
Number of repetitions	12-15	100-105
Formwork support required	More	Less
Cost of assembling and fixing	More	Less
Cost per repetition	More	Less
Labour productivity	Less	More

Why Paam ?

- Manufactured under stringent quality measures at par with international standards.
- Technical Expertise
- More than 30 years of vast experience in wood industry.
- Have widespread branch network.
- One stop solution for all your formwork needs.

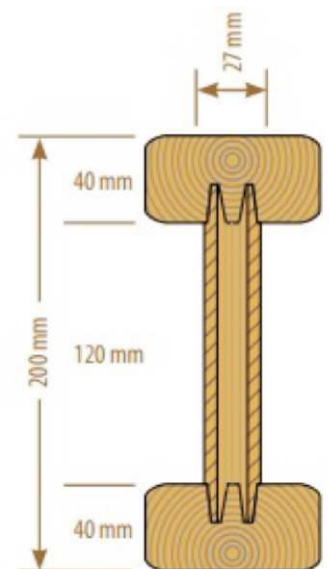

Sizes Available

- 1.) H-10, H-12, H-16 and H- 20.
- 2.) Length: 1 Meter – 4.8 Meter

Dimensions and length can be customized upon bulk orders

Also available with us

- Plastic cap for H-Beam end protection
- Tension pins for locking H-Beams

ALSO AVAILABLE

WOOD PRODUCTS

- > Shuttering Plywoods
- > Film- Faced Densified Shuttering Plywoods
- > Plywood Wall Form Panels
- > Wooden Runners
- > Flush Doors
- > Laminated Veneer Lumbers (LVL)
